Company: Arizona Public Service Company**Division:** Electric

Nature Of Opinion

Docket Number: E-01345A-19-0236**Docket Position:** Against

There has been an increase of solar systems put on residential homes and commercial building and schools. We all produce extra electricity that is sent to the grid. APS benefits from this by not having to produce that power and pay way less for this power then they charge. These solar systems also help to produce energy during high volume times like during our summer months. These systems also help with APS not stressing their during those times. Has any study been done to see how much extra power is being sent to the grid and the savings APS has generated from that power. Based on my thoughts I do not agree with any permanent rate increase
